ICD-10-CM CODING
FOR SYSTEMIC LUPUS ERYTHEMATOSUS (SLE)

U.S. HEALTHCARE PROVIDERS MUST TRANSITION TO ICD-10 BY OCTOBER 1, 2015¹

In the United States, providers and payers currently use ICD-9-CM as the standard classification system to accurately report and track the occurrence of diseases and injuries. However, starting October 1, 2015, all HIPAA-covered providers must use ICD-10-CM codes on claim forms to identify patients’ conditions.¹²

DIAGNOSIS CODING FOR SYSTEMIC LUPUS ERYTHEMATOSUS WILL CHANGE

The ICD-10 codes function the same as before, but represent a change in format and level of clinical detail. The table below outlines how the ICD-9-CM codes map to the ICD-10-CM codes.²³

<table>
<thead>
<tr>
<th>ICD-9-CM Code</th>
<th>Descriptor</th>
</tr>
</thead>
<tbody>
<tr>
<td>710.0</td>
<td>Systemic lupus erythematosus</td>
</tr>
</tbody>
</table>

**Note:** Responsibility for correct coding lies with the provider of services. The codes included in this chart are not intended to encourage or suggest the use of any drug that is not consistent with FDA-approved use of that drug.

SELECTED KEY STEPS TO ASSIST THROUGH THE TRANSITION:⁶

1) Pick the most appropriate ICD-10 code supported by clinical documentation.
2) Check payer policies to determine covered ICD-10 codes and prior authorization policies.
3) Identify the code-set being used on the CMS-1500 form by marking the space within Box 21 marked “ICD Ind” form correctly:
   • “9” for ICD-9-CM
   • “0” for ICD-10-CM

WHAT RESOURCES ARE AVAILABLE TO SUPPORT MY TRANSITION?

Provider Resources on ICD-10

The Centers for Medicare & Medicaid Services (CMS) has released resources to help providers transition to ICD-10. For overviews, implementation planning, crosswalks, videos, quick references, webcasts go to: www.cms.gov/ICD10/.
